IN THE CLAIMS:

Please amend the claims as follows:

1.   (Currently amended) A ~~system~~ printer for printing time-based media from a broadcast media feed, the ~~system~~ printer comprising:

a broadcast media receiver for receiving and outputting the broadcast media feed of time-based media;

a content-based processing logic coupled to the broadcast media receiver for monitoring the broadcast media feed of time-based media to detect ~~for~~ an occurrence of an event, the content-based processing logic ~~determining~~ processing the broadcast media feed to generate an electronic representation and a printable representation of the broadcast media feed responsive to detecting the occurrence of the event; ~~and~~

a first output device in communication with the content-based processing logic to receive the electronic representation, the first output device producing a corresponding electronic output from the electronic representation of the broadcast media feed; and

a second output device in communication with the content-based processing logic to receive the printable representation, the second output device producing a corresponding printed output from the printable representation of the broadcast media feed.

2.   (Canceled).

3.   (Canceled).

4. (Currently amended) The ~~system~~ printer of claim [[3]] 1, wherein the printed output is generated [[on]] in a video paper format.

5. (Currently amended) The ~~system~~ printer of claim [[3]] 1, wherein the printed output is generated [[on]] in an audio paper format.

6. (Currently amended) The ~~system~~ printer of claim 1, wherein the electronic representation comprises an email message.

7. (Currently amended) The ~~system~~ printer of claim 1, further comprising the content-based processing logic generating a network message responsive to detecting the occurrence of the event.

8. (Currently amended) The ~~system~~ printer of claim 7, wherein the network message comprises an email message.

9. (Currently amended) The ~~system~~ printer of claim 7, wherein the network message comprises a paging message.

10. (Currently amended) The ~~system~~ printer of claim 1, wherein the content-based processing logic is user-programmable to indicate the event to be monitored.

11. (Currently amended) The ~~system~~ printer of claim 1, wherein the content-based processing logic is user-programmable to indicate a response to be generated.

12.   (Currently amended) The ~~system~~ printer of claim 1, ~~further comprising the processing logic extracting~~ wherein the content-based processing logic extracts data from a web page responsive to detecting the occurrence of the event.

13.   (Currently amended) The ~~system~~ printer of claim 1, ~~further comprising the processing logic extracting~~ wherein the content-based processing logic extracts data from the media feed responsive to detecting the occurrence of the event.

14.   (Currently amended) The ~~system~~ printer of claim 13, , ~~further comprising the processing logic extracting~~ wherein the content-based processing logic extracts close caption text from the media feed.

15.   (Currently amended) The ~~system~~ printer of claim [[1]] 13, , ~~further comprising the processing logicextracting~~ wherein the content-based processing logic extracts key frames from a video feed.

16.   (Currently amended) The ~~system~~ printer of claim 1, further comprising the content-based processing logic broadcasting a video feed responsive to detecting the occurrence of the event.

17.   (Currently amended) The ~~system~~ printer of claim 1, further comprising the processing logic broadcasting an audio feed on a speaker responsive to detecting the occurrence of the event.

18.   (Currently amended) The ~~system~~ printer of claim 1, wherein the media feed comprises live media feed.

19.　(Currently amended)　The ~~system~~ <u>printer</u> of claim 1, further comprising a media ~~source~~ <u>recorder</u> for ~~providing~~ <u>recording</u> the media feed.

20.　(Canceled).

21.　(Currently amended)　The ~~system~~ <u>printer</u> of claim 1, wherein the event comprises a coded signal embedded in the media feed.

22.　(Currently amended)　The ~~system~~ <u>printer</u> of claim 21, wherein the coded signal corresponds to an EAS alert.

23.　(Currently amended)　The ~~system~~ <u>printer</u> of claim 21, wherein the coded signal corresponds to a NWS alert.

24.　(Currently amended)　The ~~system~~ <u>printer</u> of claim 21, wherein the coded signal corresponds to an EBS alert.

25.　(Currently amended)　The ~~system~~ <u>printer</u> of claim 21, further comprising a decoder for decoding coded signal.

26.　(Currently amended)　The ~~system~~ <u>printer</u> of claim 21, wherein the coded signal comprises a digital data embedded in the media feed.

27.　(Currently amended)　The ~~system~~ <u>printer</u> of claim 21, wherein the coded signal comprises a tone sequence embedded in the media feed.

28.　(Currently amended)　The ~~system~~ <u>printer</u> of claim 1, wherein the event comprises an appearance of an image in the media feed.

29. (Currently amended) The ~~system~~ printer of claim 1, wherein the media feed comprises an audio stream.

30. (Currently amended) The ~~system~~ printer of claim 1, wherein the media feed comprises a video stream.

31. (Currently amended) A method for printing time-based media from a broadcast media feed, the method comprising:

receiving the broadcast media feed of time-based media;

monitoring the broadcast media feed of time-based media to detect ~~for~~ an occurrence of an event;

~~determining~~ processing the broadcast media feed to generate an electronic representation of the broadcast media feed and a printable representation of the broadcast media feed responsive to detecting the occurrence of the event; and

generating a corresponding ~~electronic~~ printed output from the printable ~~the electronic~~ representation of the broadcast media feed.

32. (Canceled)

33. (Original) The method of claim 31 further comprising generating an email message from the electronic representation of the media feed.

34. (Currently amended) The method of claim 31 further comprising generating a network message responsive to detecting the occurrence of the event.

35. (Original) The method of claim 31 further comprising defining the event to be monitored.

36.   (Currently amended) The method of claim 31 further comprising extracting data from a web page responsive to detecting the occurrence of the event.

37.   (Currently amended) The method of claim 31, wherein processing the media feed comprises further comprising extracting close caption text from the media feed.

38.   (Currently amended) The method of claim 31, wherein processing the media feed comprises further comprising extracting key frames from a video feed.

39.   (Currently amended) The method of claim 31 further comprising broadcasting a video feed responsive to detecting the occurrence of the event.

40.   (Currently amended) The method of claim 31 further comprising broadcasting an audio feed responsive to detecting the occurrence of the event.

41.   (Original) The method of claim 31 further comprising further comprising decoding a coded signal in the media feed.

42.   (New) The printer of claim 1, wherein the media receiver comprises a receiving means selected from a group of an antenna, a satellite dish, and a cable line.

43.   (New) The printer of claim 1, wherein the media receiver is adapted to receive media signals at multiple frequencies simultaneously.
